

AUXICO RESOURCES

CSE: AUAG - Corporate Presentation Q3 2022

DISCLAIMER - Forward Looking Information

This presentation, the information contained herein, any other materials provided in connection with this presentation and any oral remarks accompanying this presentation (collectively, the "Presentation"), have been prepared by Auxico Resources Canada Inc. ("AUXICO" or the "Company") solely for information purposes. No stock exchange, securities commission or other regulatory authority has approved or disapproved of the information contained herein. This Presentation does not constitute an offering of securities and the information contained herein is subject to the information contained in the Company's continuous disclosure documents available under the Company's profile on www.SEDAR.com.

The following presentation contains data provided to AUXICO. As such, the Company has taken all reasonable care in reproducing the information herein. Material in this presentation may contain technical or other inaccuracies, omissions, or typographical errors, for which the Company assumes no responsibility. The Company does not warrant or make any representations regarding the use, validity, accuracy, completeness or reliability of any claims, statements or information in this presentation. Under no circumstances, including, but not limited to, negligence, shall the Company be liable for any direct, indirect, special, incidental, consequential, or other damages, including but not limited to, loss of programs, loss of data, loss of use of computer or other systems, or loss of profits, whether or not advised of the possibility of damage, arising from the use, or inability to use, the material in this presentation. The information presented herein is not a substitute for independent professional advice before making investment decisions.

This Presentation contains "forward-looking information" within the meaning of applicable Canadian securities legislation or "forward-looking statements" within the meaning of applicable United States securities legislation (collectively, "forward-looking statements"). The forward-looking statements herein reflect management's expectations regarding the future growth, results of operations, performance and business prospects and opportunities of AUXICO. Such forward-looking statements may include, but are not limited to, statements with respect to the future outlook of the Company, business plans and strategies, proposed exploration plans, future commodity prices; success of exploration activities; results of any Technical Report, the characteristics and potential of the Company's projects, completion of any recommended work programs or expansions and any timing thereof, and working capital. This presentation may contain forward-looking statements, including but not limited to comments regarding predictions and projections. Forward-looking statements address future events and conditions and therefore involve inherent risks and uncertainties. Actual results may differ materially from those currently anticipated in such statements.

Often, but not always, forward-looking statements can be identified by the use of words such as "plans", "expects", "is expected", "budget", "scheduled", "estimates", "forecasts", "intends", "anticipates", "believes" or variations (including negative and grammatical variations) of such words and phrases, or statements that certain actions, events or results "may", "could", "would", "might" or "will" be taken, occur or be achieved.

Forward-looking statements involve known and unknown risks, uncertainties, assumptions and other factors that may cause the actual results, performance or achievements of the Company to be materially different from any future results, performance or achievements expressed or implied by the forward-looking statements. Such factors include, among others: general business, economic, competitive, political and social uncertainties; uncertainties arising from the COVID-19 outbreak; the actual results of current exploration activities; conclusions of economic evaluations; fluctuations in currency exchange rates; changes in project parameters as plans continue to be refined; changes in labour costs or other costs; future prices of commodities or metal prices; possible variations of mineral grade or recovery rates; failure of equipment or processes to operate as anticipated; accidents, labour disputes and other risks of the mining industry, including but not limited to environmental hazards, equipment breakdown, employee sickness and acts of God or other unfavourable operating conditions and losses; delays caused due to a breakdown in relations with various local indigenous nations or on whose traditional territory where projects are located; delays in obtaining governmental approvals, project financing or in the completion of exploration activities; and the factors discussed in the section entitled "Risk Factors" in this Presentation. **Readers are cautioned that the foregoing list of factors and those contained elsewhere in this Presentation are not exhaustive.**

Although the Company has attempted to identify important factors that could cause actual actions, events or results to differ materially from those described in forward-looking statements, there may be other factors that cause actions, events or results to differ from those anticipated, estimated or intended. Forward-looking statements contained herein are made as of the date of this Presentation and AUXICO disclaims any obligation to update any forward-looking statements, whether as a result of new information, future events or results or otherwise, except as required by applicable laws. There can be no assurance that forward-looking statements will prove to be accurate, as actual results and future events could differ materially from those anticipated in such statements. Accordingly, readers should not place undue reliance on forward-looking statements.

Mineral Resource Estimates and Technical Report, Qualified Person

In accordance with applicable Canadian securities regulatory requirements, unless otherwise stated, all current mineral resource estimates of the Company disclosed in this Presentation have been prepared in accordance with National Instrument 43-101 - Standards of Disclosure for Mineral Projects ("NI 43-101"), classified in accordance with Canadian Institute of Mining Metallurgy and Petroleum's CIM's Definition Standards for Mineral Resources & Mineral Reserves, Pursuant to the CIM Guidelines, mineral resources have a higher degree of uncertainty than mineral reserves as to their existence as well as their economic and legal feasibility. Inferred mineral resources, when compared with measured or indicated mineral resources, have the least certainty as to their existence, and it cannot be assumed that all or any part of an inferred mineral resource will be upgraded to an indicated or measured mineral resource as a result of continued exploration. Accordingly, readers are cautioned not to assume that all or any part of a mineral resource exists, will ever be converted into a mineral reserve, or is or will ever be economically or legally mineable or recovered. Unless stated otherwise herein, all scientific and technical data contained in this presentation has been reviewed, approved and verified by Jorge Cruz Martin, who is a Qualified Person for the purposes of the Technical Report NI 43-101, an independent consultant to AUXICO.

THE COMPANY - Critical Resource Deposits Poised For Growth

AUXICO RESOURCES CANADA INC., CSE: AUAG, ("AUXICO" or the "Company") is a Canadian company founded in 2014, focused on the production of **critical minerals and high-value metals**, including niobium, tantalum, platinum group metals (such as platinum and iridium), **and rare earth elements**. The Company is the exclusive trade agent for rare earth concentrates from the Democratic Republic of Congo (DRC) with Central America Nickel (CAN), containing rare earths used as permanent magnet materials and including neodymium, praseodymium, dysprosium, terbium and gadolinium. The Company owns directly or through joint ventures, mineral rights in Colombia, Bolivia, and Brazil.

The Company is positioned to be a **major supplier of critical minerals and rare earth elements**, with access to close to 4 million tonnes of such minerals - *one of the largest deposits outside of China*.

This includes ± 1 million metric tonnes (MMT) of rare earths and other critical metals such as coltan in Colombia, ± 1 MMT of rare earths in Brazil, ± 1 MMT of rare earths and critical minerals in the DRC, ± 1 MMT of critical minerals in Bolivia, collectively with rare earth (RE) concentrates containing in average a total rare earth oxide (TREO) content in excess of 54-63%.

The Company has licensed a technology called the Ultrasound Assisted Extraction (UAEx), which has been proven successful at recovering rare earths (84%+ recoveries in solution), as well as other critical minerals.

INVESTMENT HIGHLIGHTS

COLOMBIA

An NI-43101 report on the Company-controlled Minastyc property exhibits samples of **total rare earth oxides concentrates grading 68.25% and 65.57%**, and surface discovery of high-grade gold, platinum, titanium, zirconium, hafnium and iridium. The National Mining Agency of Colombia (ANM) has **granted a mining permit for the Minastyc Property**. AUXICO has entered into an agreement for the trading of industrial sands (tantalum concentrates) originating from the department of Vichada, Colombia, as well as the trading of tin through a **JV with Gracor SAS**, averaging 65% tin content.

BRAZIL

AUXICO has signed a JV agreement with Cooperativa Estanifera de Mineradores da Amazonia Legal Ltda (“CEMAL”), for the development of the Massangana tin tailings project with estimated 30,000,000 tonnes of tailings, **averaging 2.83% TREO**. A production plan has been established for 750,000 tonnes per year (“tpy”) of tin tailings to produce tin, ilmenite, zircon, columbite and rare earths. Off-take agreement signed with Cuex for 3,600 tpy of tin.

DRC

Auxico signed a sales agency agreement for the trading of non-radioactive rare earth concentrates from the DRC. A cumulative quantity of 720 tonnes of rare earth concentrates were sold as of September 2022, according to a 5-year off-take agreement for a minimum amount of 18,000 tonnes of concentrates during the term i.e. 300 tonnes per month (“tpm”), with a target objective of 1,000 tpm. Auxico signed a 10-year off-take agreement with Lasell Company Ltd. for a supply of up to 1,000 tpm of tantalum ore (30% Ta₂O₅ content).

BOLIVIA

AUXICO has entered into MOU for exploitation and commercialization of tantalum, niobium, iridium and tin from industrial sands located in the Province of Ñuflo de Chávez, Bolivia; samples indicate grades 59.79% Ta and 2.68 kg Ir.

PATENTED ENVIRONMENTALLY-FRIENDLY ULTRASOUND TECHNOLOGY (UAE_x) IS VERY EFFECTIVE ON HIGH-VALUE RARE EARTH SAMPLES, ACHIEVING +84% RECOVERIES OF SELECT RARE EARTH ELEMENTS OVER A 2-HOUR LEACHING TIME, AS DISPLAYED IN THE DEPOSIT SAMPLES ACCESSIBLE FROM **AUXICO'S PORTFOLIO OF PROPERTIES**

TIMELINE - Developments on the Path to Leading Rare Earth and Critical Minerals Supply

*OTCQB: mid-tier U.S. based OTC venture equity market
 *LSE: London Stock Exchange

TIMELINE - Developments on the Path to Leading the the Rare Earth and Critical Minerals Supply

Surface discovery of **high-grade gold, platinum, titanium, zirconium and hafnium** test results on samples taken from the Minastyc property:

- 1m from surface, 14 samples from these areas gave an **average head grade of 9.5 g of gold, and 13.5 g of platinum** (from 8 of the 14 samples that returned grade);
- Discovery of **24.5% titanium, 7.8% zirconium, and 2.4 kg/ton of hafnium**; results are from fine concentrates taken at various sample points.
- Previously reported 3.2 tonne bulk sample from 2 locations of Area 50 pit; 7.7 kg fine concentrate returned **TREO grades 68.25% and 65.57%**.
- Minastyc Property **NI43-101 Technical Report** to be updated near term, pending assay results.

JV agreement signed with Brazilian mining cooperative CEMAL with regard to **Massangana project** representative of **30 million MT of tin tailings**, Brazil:

- Products that could be generated from the tin tailings: columbite concentrate at **±60% Nb/Ta** grade, monazite concentrate containing **±50% TREO, ±55% zircon, ±48% ilmenite**, and cassiterite concentrate containing **±70% tin**.
- Production plan to process 2,500 tpd of tailings: 6,000 tpy of tin cassiterite, 90,000 tpy ilmenite, 90,000 tpy zirconite, 13,500 tpy columbite, 37,500 tpy monazite.
- **Cuex off-take** executed for **3,600 tpy of tin**.

JV agreement signed with Gracor SAS Colombia with regard to **tin trading operations** with average grades **65% tin content**.

- The objective is to export a minimum of 100 tonnes per month of high-grade tin.
- Previously announced samples from pits on the Company-controlled property displayed test results of **33.75-62.13% tin content**, inferring the development potential of a major tin operation in Colombia.

APR 2022

MAY 2022

JUNE 2022

SEP 2022

OCT 2022

Sales agency agreement with Central America Nickel with regard to the **exclusive trading rights for rare earth concentrates** being exported from the DRC:

- **1st shipment of 96 tonnes of rare earth concentrates** from the DRC exported by CAN, average **price of US \$4,784/ tonne**;
- AUXICO retains a commission equal to 15% on every sale over the next 2 years,

The **National Mining Agency of Colombia** (ANM) has **granted a mining permit for the Minastyc Property**. Pending the authorization from Corporinoquia (Colombian environmental agency), the Company will be able to move equipment on site, which will enable AUXICO to commence small scale mining operations.

10-year off-take agreement with Lasell Company Ltd. for a supply of up to **1,000 tpm of tantalum ore (30% Ta2O5 content)**. Lasell will have a right of first refusal on production exceeding 1,000 tpm. Initial trial shipments of 25 tonnes per month are expected to begin in Q4 2022, with plans to expand into commercial production over the course of 2023.

AUXICO executed 3rd and 4th **trades of a combined 432 tonnes of RE (monazite sands)**; initial testing on samples of the material indicated an average grade of **14.01% Nd**, and a **~60% TREO**.

- **Cumulative 720 tonnes of RE** exported by AUXICO from the DRC as sales agent to Central America Nickel, representing total provisional value of **US\$ 3.8M**.
- **2nd trade of 192 tonnes of RE ore**; executed in July and sold at a final price of **US\$ 6,500/MT** for a value of US\$1.248M with reported average of grades **14.95% Nd and 3.4% Pr**, and **~60% TREO content**.

TIN IN COLOMBIA

AUXICO has signed a **joint-venture agreement for high-grade tin trading operations** in Colombia, which provides the Company with a 70% profit share on all sales of tin ore executed with Gracor S.A.S. (“Gracor”). This agreement represents a significant amount of tin and potentially a new source of sustainable revenue for the Company, with the objective of exporting a minimum of 100 tonnes per month of high-grade tin at **average grades exceeding 65% tin content**. The 3-month bid price of tin per tonne is \pm US\$18,400 on the LME, effective October 26th, 2022.

Gracor’s principal business is the purchase of tin from the indigenous population in the state of Vichada, Colombia. Gracor is purchasing ore rich in tin content, sourced from and hosted in alluvial sands on surface, on properties in close proximity to Auxico’s Minastyc Property. Auxico will be providing Gracor with the working capital to increase its direct purchases and will sell tin according to international standards.

- Reported June 2021: discovery of a high-grade tin-tantalum target area on its Minastyc Property (with titanium, niobium, scandium and hafnium credits) that has been subject to pit sampling (*Table 1*).
- Samples previously taken from the tin-tantalum target area were the result of pan concentration and screening, and were sent to Canada for analysis by Coalia Research Institute in Thetford Mines. Previously announced samples from pits on the Company-controlled property displayed test results of **33.75-62.13% tin content**, inferring the development potential of a major tin operation in Colombia (*Table 1*).
- A series of tests including magnetic gravity and optical separation on the above samples to produce separate concentrates of tin, tantalum, scandium and hafnium in order to optimize the value of each concentrate.

Table 1: Tin-Tantalum Target Area

	SnO2 %	Ta2O5 %	TiO2 %	Nb2O5 %	Sc2O3 %	HfO2 %	Yb2O3 %
Sample #1	33.75	25.08	15.50	7.45	0.59	0.34	0.12
Sample #2	44.60	18.71	11.46	8.15	0.38	0.24	0.21
Sample #3	62.13	12.58	6.40	5.35	0.29	0.16	0.21
Sample #18	47.20	9.29	0.07	3.24	0.13	0.06	0.40
Average grade across 4 samples	46.92	16.415	8.3575	6.0475	0.3475	0.2	0.235
Market price/ton (\$USD)	18,000	158,000	3,000	170,000	3,800,000	80,000	50,000
Value/ton (\$USD)	8,445.60	25,935.70	250.72	10,280.75	13,205.00	160.00	117.50

For discussion purposes only: Total value per ton = \$58,395.27

**Note: representative of only the above 4 samples and not a resource, also market pricing may vary
Reference to Minastyc Property samples announced in news release dated June 24, 2021*

RARE EARTHS IN COLOMBIA

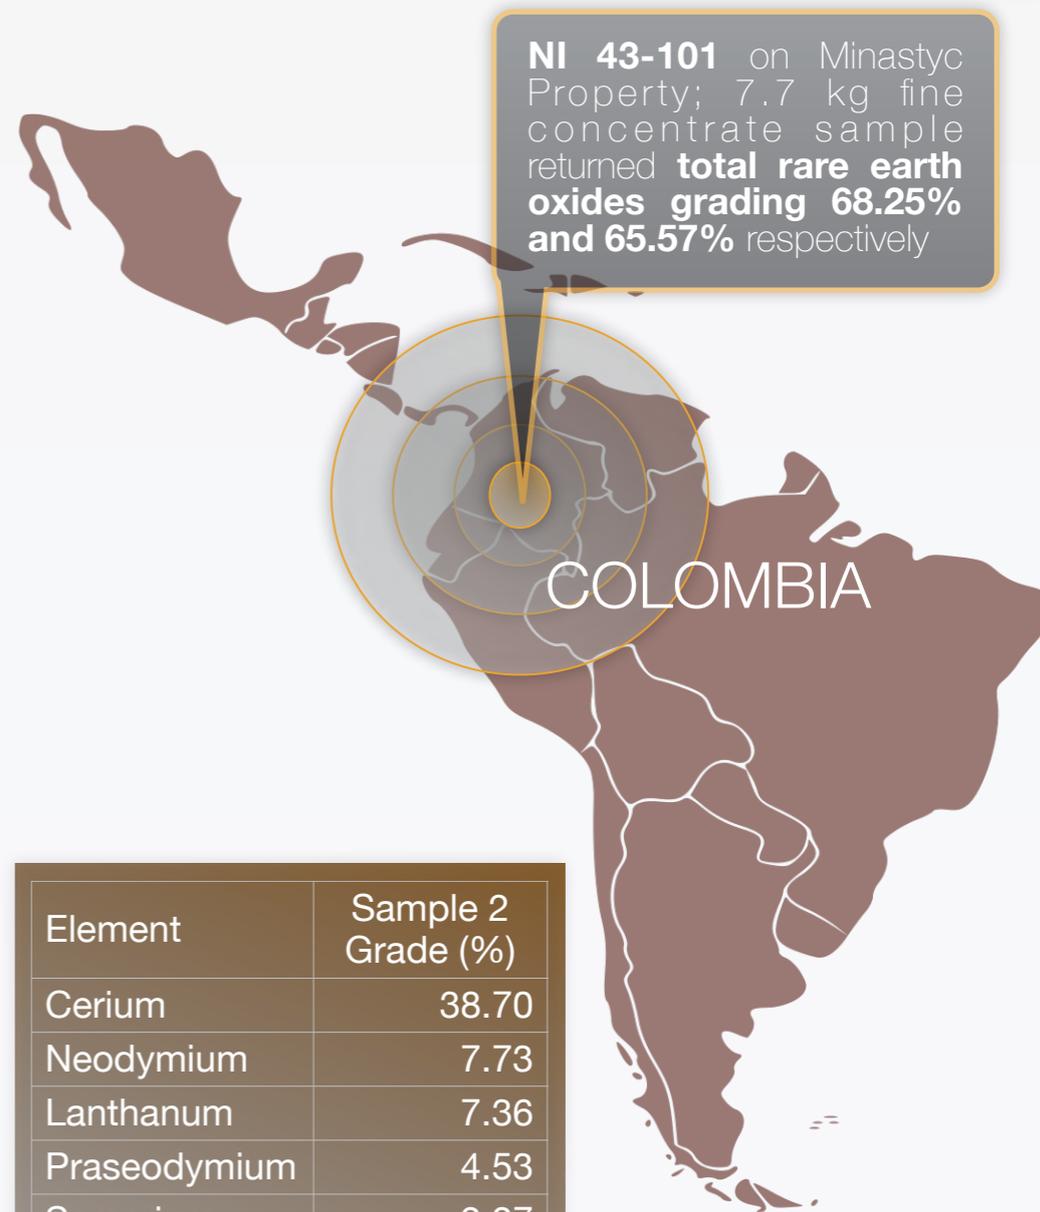

AUXICO holds mineral and surface rights to the Minastyc Property located in the municipality of Puerto Carreño, along with a mining production permit awarded by National Mining Agency of Colombia (ANM). The Company is now in process of transferring the Minastyc property title to the Company.

AUXICO has made a **significant rare earth discovery of TREO content of 56.81%**, due to a historical asteroid impact point in close proximity ~150 km from the property, with asteroid mineralization rich of REE extending past Puerto Carreño. Test results on a sample from a pit on the property resulted in 47% tin content, along with tantalum, niobium, scandium and rare earth metals, as analyzed by Coalia Research Institute in Thetford Mines, Canada. This results from a satellite imagery interpretation study which identified in excess of 20 priority exploration targets in the process of being sampled.

AUXICO **acquired the surface rights to 1,482 hectares of land** between two adjoining properties; Agualinda and the Mynastyc property. The Company signed an MOU to earn a 70% interest in 20,000 hectares of land owned by the indigenous community of Guacamayas-Maipore, for the exploitation of industrial sands (tantalum ore). The properties are located within a strategic area designated by the Colombian Government for its potential for tantalum, niobium and rare earths. Currently, a systematic initiative of digging ~250 pits using shovels is being executed via a grid system.

Subsequent discoveries adjacent to the Company-controlled property; at a distance of 1.6 km from the initial discovery with **TREO content of 55.03% in concentrates**, and the discovery of high-grade rare earth metals at a distance of 9 km, within the 20,000-hectares permit area held by the Guacamayas-Maipore community. For reference, please see on the right Sample 2 with a **TREO content of 63.21%**.

Following the environmental assessment and approvals, the Company would have the capacity to sell up to 300 tonnes of RE concentrates per month from its Minastyc property. Approximately 250 pits have been conducted on the property, pending sampling analysis, the Company could establish a resource estimate and upgrade the NI 43-101; sampling has been useful in providing a perspective on paleo channel flow, direction and dip for future modelling (defining vertical sections of 3-4 metres).

Element	Sample 2 Grade (%)
Cerium	38.70
Neodymium	7.73
Lanthanum	7.36
Praseodymium	4.53
Samarium	2.27
Gadolinium	1.38
Dysprosium	0.71
Yttrium	0.05
Ytterbium	0.35
Erbium	0.13
Total RE (%)	63.21

COLTAN IN COLOMBIA

AUXICO has entered into a commercial agreement with Minampro Asociados S.A.S. for the **exploitation and trading of industrial sands to supply a minimum of 25 tonnes of tantalum concentrates** originating from Vichada, Colombia. Minampro Asociados S.A.S. is licensed for the buying, selling and exporting of various minerals, and holds the exclusive purchase agreement with indigenous community Guacamayas-Maipore.

HIGH-VALUE METAL DISCOVERY, INCLUDING IRIDIUM

Gold, platinum, titanium, zirconium and hafnium test results on samples taken from the Company-controlled Minastyc property:

- Within the first metre from surface, 14 samples from these areas gave an average head grade of **9.5 grams of gold**, and **13.5 grams of platinum** (from 8 of the 14 samples that returned grade). The presence of thorium has not been observed within the top metre;
- Discovery of **24.5% titanium**, **7.8% zirconium**, and **2.4 kilograms/ton of hafnium**; results from fine concentrates taken at various sample points;
- Observations in the field estimate a **minimum of 250,000 tonnes of material** is represented by a Ferricrete layer in the first metre from surface, over surface area of 6.5 hectares;
- A satellite imaginary study confirms an area of ~150 hectares with the identical signature as Area 50. Assuming that the new targets contain the same grades of mineralization as identified in Area 50, the projected mineralization would equate to 10,000,000 tons of material, if evaluated under the same conditions of the 6.5 hectares findings. The Company could potentially hold 10,000,000 tons at 17 g/t Au Eq = **potential to host ~6 million ounces of Au Eq at surface**, without any drilling. The rare earth content has been identified in layers of mineralized below the surface layer;
- Previous samples from the property contained high-grade titanium rock sample, with 42.85% titanium, 25.44% niobium, 8.28% tantalum and 53.53 g/t of iridium. Samples found in a different zone on the property, originating from a rock sample containing 30.41% tantalum, 23.30% niobium and 24.47 titanium.

DEPOSITS - Commercializing the Brazil Tin Tailings Deposit

AUXICO has signed a JV agreement with the Brazilian mining cooperative Cooperativa Estanifera de Mineradores da Amazonia Legal Ltda (“CEMAL”), with regard to the exploitation and commercialization of a tin tailings deposits located over an area of 17,000 hectares in Massangana, in the state of Rondonia, Brazil. AUXICO has exclusive rights to purchase the tailings material, engaging CEMAL and/or other parties in Brazil in the production process, AUXICO will benefit from 85% profit share (transaction price of US\$2M). These properties have an estimated **30,000,000 tonnes of tin tailings**, based on study prepared by the German Mineral Resources Agency and Geological Survey of Brazil. Data for this estimate has yet to be reviewed and verified by AUXICO’s Qualified Person.

Highlights of the Massangana project:

- The types of products that could be generated from the tin tailings include columbite concentrate at **±60% Nb/Ta grade**, monazite concentrate containing **±50% TREO**, **±55% zircon**, **±48% ilmenite**, and cassiterite concentrate containing **±70% tin**.
- The property is fully permitted for extraction and treatment of the tailings and the production of the first four concentrates; tin/cassiterite concentrate, columbite (tantalum-niobium) concentrate, ilmenite and zircon concentrate.
- AUXICO intends to process these tailings at a rate of 750,000 tonnes per year resulting in 6,000 tpy of tin cassiterite, 90,000 tpy ilmenite, 90,000 tpy zirconite, 13,500 tpy columbite, 37,500 tpy monazite.
- AUXICO has signed a **5-year off-take agreement with Cuex**, Swiss subsidiary of Shanghai Qunxian Industrial (Group) Co., Ltd., a bulk commodity Chinese trading company, representative of a purchase of 3,600 tonnes per year, for a total of 18,000 tonnes of commercial tin concentrates, [press release link](#).
- AUXICO has successfully removed the thorium content, making the concentrate non-radioactive and eligible for international shipping. Using the UAEx process, the **thorium content in the concentrate was reduced to less than 0.1%**;

Phase 1: production of concentrates using gravity and magnetic separation processes, the concentrates are produced simultaneously i.e. by concentrating tin, the residue gets concentrated with tantalum-niobium etc. Despite not having permits for the production of the monazite concentrate, this concentrate will be a by-product of the production process and can be either stockpiled for further processing, or sold at ±50% TREO concentrate.

CREC announced investment of ~\$300M in Ariquemes, property adjacent to Massangana property.

Element	Brazil Concentrate Grade (%)	Average UAEx Recovery (%)	Effective Recovery (%)	USD \$/MT (2022-03-03)	USD \$ element/tonne
Cerium	35.90	94.43	33.90	1,465	496
Dysprosium	0.28	83.54	0.23	492,000	1,150
Gadolinium	0.17	100.00	0.17	99,905	169
Lanthanum	15.17	94.24	14.30	1,425	203
Neodymium	9.04	92.51	8.36	190,000	15,889
Praseodymium	0.89	100.00	0.89	173,000	1,539
Samarium	0.90	93.28	0.84	4,735	39
Yttrium	1.14	80.80	0.92	14,850	136
Total RE (%)	63.49				19,626

* Samples of concentrates taken by the Massangana property owners were recently analyzed by Coalia Research Institute; Results of selected concentrate samples indicate a TREO of 63.49%.

RARE EARTHS IN DRC

AUXICO entered into a sales agency agreement with Central America Nickel (“CAN”), with regard to the **exclusive trading rights for rare earth concentrates** currently being exported from the DRC. Kibara Minerals, subsidiary of AUXICO’s joint venture partner CAN, holds resources in excess of 1 MMT of rare earth elements in the first metre of its Obaye reserves, open N-E-W, with rare earth oxides content equivalent to that of the Mountain Pass mine (NYSE: MP, valuation~\$5B). A geological report concluded that Obaye is a world-class deposit hosted in monazite sands that extends over 4 km in the N-S direction, and 2 km in the E-W direction. [Report Link](#). Kibara Minerals has the exclusive option to purchase nodular monazite (natural RE concentrate) from a DRC mining cooperative. The trading of rare earth concentrates out of the DRC represents a sustainable source of revenue for AUXICO.

Effective April 19, 2022, a first shipment of 96 tonnes of rare earth concentrates from the DRC have been exported at an average price of US\$ 4,784 per tonne, of which AUXICO is subject to a 15% commission. **Trades with a cumulative 720 tonnes of monazite RE concentrates have been finalized** since April 2022, according to an off-take agreement with a 5-year term, for a minimum amount of 18,000 tonnes of concentrates during the term i.e. 300 tpm. With a target objective of 1,000 tonnes of concentrates per month, this represents **~US\$72M in annual revenues** based on current sales metrics, of which AUXICO retains a 15% sales commission. [Press release link](#).

AUXICO executed a **second trade of rare earths for a total of 192 tonnes** in July sold at a final price of **US\$ 6,500/MT** for a value of US\$1.248M. Samples analyzed by SGS South Africa reported average grades of **14.95% Nd and 3.4% Pr** and confirmed the samples had a **~60% total rare earth oxide content**.

Element	DR Congo Grade (%)	Average Recovery (%)

Dysprosium	0.09	88.11
Gadolinium	0.73	89.16
Lanthanum	9.41	87.09
Neodymium	12.34	85.96
Praseodymium	2.58	88.77
Samarium	1.99	87.19
Yttrium	0.49	76.84
Total RE (%)	59.24	87.06

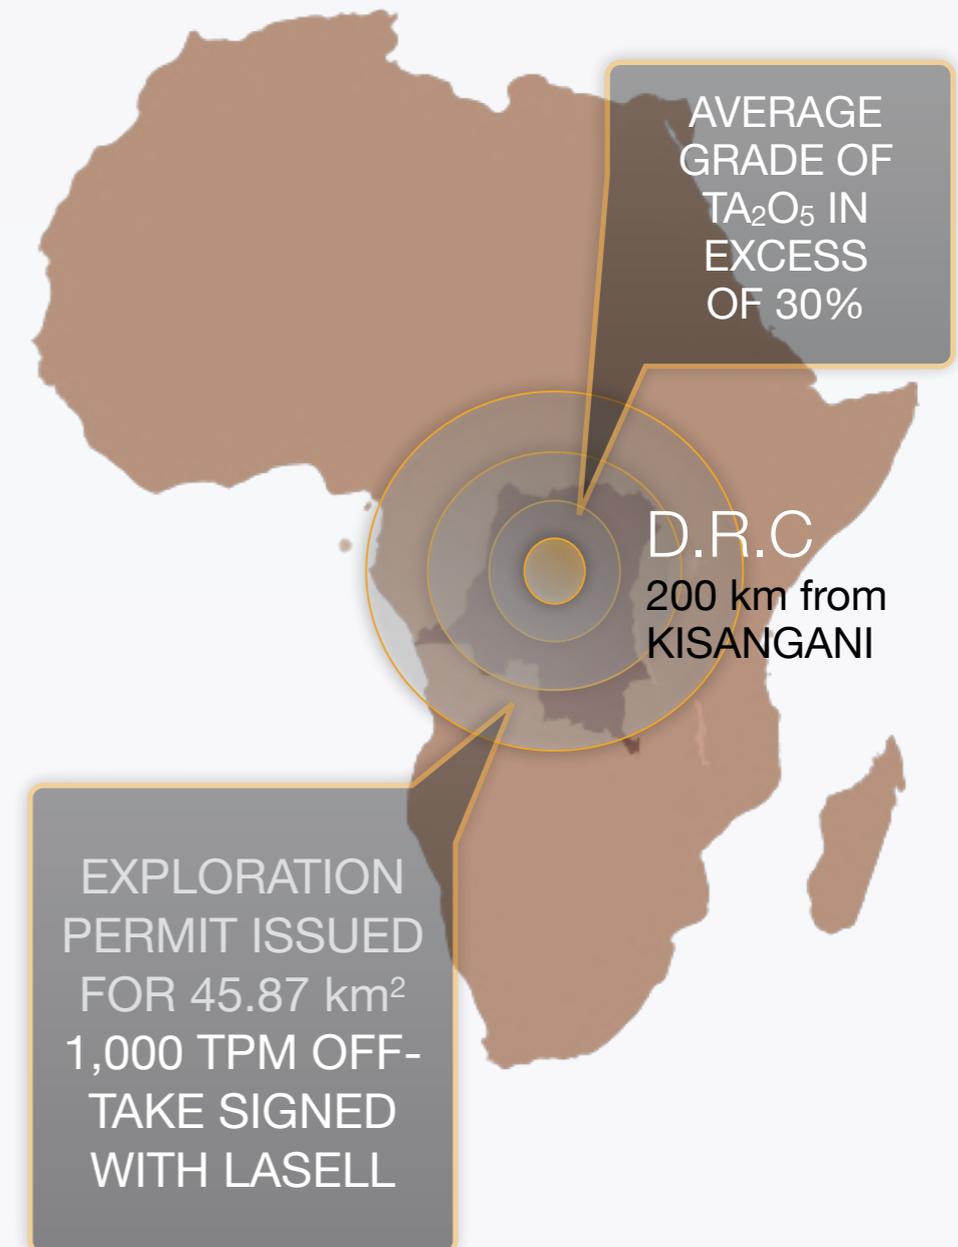

COLTAN IN DRC

AUXICO has signed a joint venture agreement with Kibara Minerals (subsidiary of Central America Nickel Inc.) for the export of tantalum and niobium ores from the DRC. Kibara has access to high-grade tantalite mineral deposits in the DRC and an exclusive supply agreement with a cooperative for the purchase of tantalite ore from the Bafwasende artisanal deposit located 200 km from Kisangani in the north-central part of the DRC.

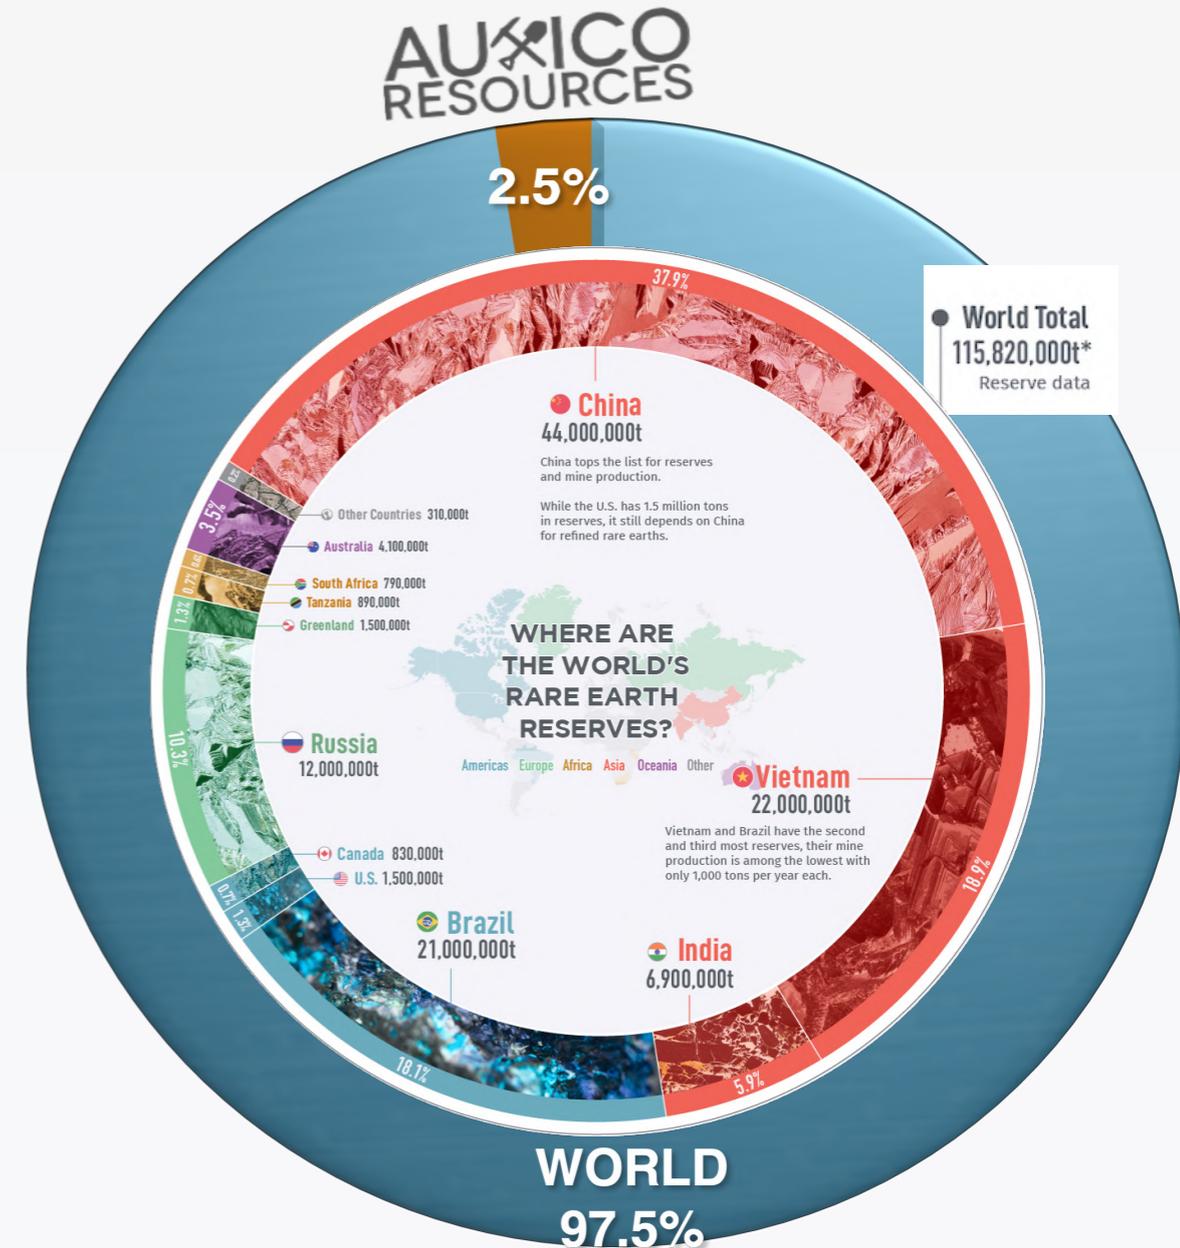

- Tantalite ore samples from the Bafwasende deposit have been tested by an independent laboratory, IGS, with grades of 22% Nb₂O₅ (niobium pentoxide) and 46% Ta₂O₅ (tantalum pentoxide). Other reports confirmed similar findings, including ore up to 55% Nb₂O₅ and 30% Ta₂O₅.
- In 2020, one of the Company's potential buyers also performed its respective tests, which resulted in 42.04% Ta₂O₅ and 22.93% Nb₂O₅. Initial geological surveys were carried out at the Bafwasende Tantalum deposit on foot, focusing on a known source of Ta₂O₅ in an area of 400-metres in length by 200-metres in width; 7 exploration pits were dug over the identified mineralization zone and columbite concentrates recovered from the site have shown an average grade of Ta₂O₅ in excess of 30%. An aerial study of the permitted and the surrounding areas conducted by JAPOSAT in March 2021 reconfirmed the initial mineralization and has identified three additional areas of interest within the same basin.
- AUXICO and partner Covemin, a commodity trading firm based in Zurich, have established relationships with the global buyers of tantalite ore; AUXICO and Kibara will collaborate on a trading operation of tantalum and niobium-bearing ores from the Bafwasende deposit.
- **10-year off-take agreement executed with Lasell Company Ltd.** ("Lasell") for a supply of up to 1,000 tonnes per month (tpm) of tantalum ore, targeted purity of 30% Ta₂O₅ content and pricing based on AMI. Lasell will have a ROFR on production exceeding 1,000 tpm. Initial trial shipments of 25 tpm expected to begin in Q4 2022, with plans to expand into commercial production over the course of 2023.
- Tantalite ore for this off-take is sourced and executed by JV partner, Kibara Minerals, AUXICO holds a 70% stake under a profit-share agreement. A full **exploration permit** covering an area of approximately 45.87 km² has been issued by the Ministry of Mines of the DRC.

MARKET DEMAND - Minerals Deemed Strategic and Essential to Economy and Defence

Rare earths are fundamental building blocks of the modern economy, enabling trillions of dollars in global GDP via a wide range of clean energy, information technology, defense and industrial applications. The adoption of electric devices, vehicles and heightened demand for advanced technologies and superalloys is global, and will test the limits of current mineral supply. The rapid emergence of the world's renewable energy sector is helping set the stage for a commodity boom; REE used in electric vehicles and emerging technologies depicts a **demand increase of 12 times by 2050** to reach emission targets set by the Paris Agreement, whereby China has a near monopoly on over 81% global supply of all REE metals. **China also dominates the market with more than 90% of the NdFeB magnet production globally**, a key component for wind turbines, electric cars and electronic appliances. In 2021, China exported 48765 metric tonnes of permanent magnets worth of almost US\$ 3B. 'The **annual demand for rare-earth metals** has doubled to 125,000 tonnes in 15 years, and the demand is **projected to reach 315,000 tonnes in 2030**, driven by increasing uptake in green technologies and advanced electronics. This is creating enormous pressure on global production.

The U.S. aims to cut its greenhouse gas emissions in half by 2030 as part of its commitment to tackling climate change, but might be lacking the critical minerals needed to achieve its goals. Critical minerals are 50 minerals that the federal government considers critical to the U.S. economy or national security, identified by the U.S. Geological Survey every year. In 2018, the U.S. Department of the Interior released a list of **35 critical minerals**, and a **new list released in Feb 2022, contains 15 more commodities**. While the US reported the second highest output of rare earths in 2021 at 43,000 MT, the country takes the sixth top spot in global rare earths reserves, at a total reserve estimate of 1.8 million MT. **US import reliance of critical metals including rare earths is more than 95%** (USGS). According to one analysis, 95% of critical mineral reserves in the US are within 35 miles of a tribal reservation, which further limits their ability to execute large mining production activities. China has only about a third of the world's known reserves but as much as 85% of processed rare earth elements come from China. In July 2022, Canada's House of Commons Standing Committee on Industry and Technology issued a report entitled: POSITIONING CANADA AS A LEADER IN THE SUPPLY AND PROCESSING OF CRITICAL MINERALS, an initiative with a federal budget of \$3.8 billion for development and implementation of Canada's first critical minerals strategy.

GLOBAL REE SUPPLY

* USGS Mineral Commodity Summaries

"The world is about to experience its biggest shift in commodities demand since the 19th century."

The Wall Street Journal

SEPARATION TECHNOLOGY - Ultrasound Assisted Extraction (UAEx)

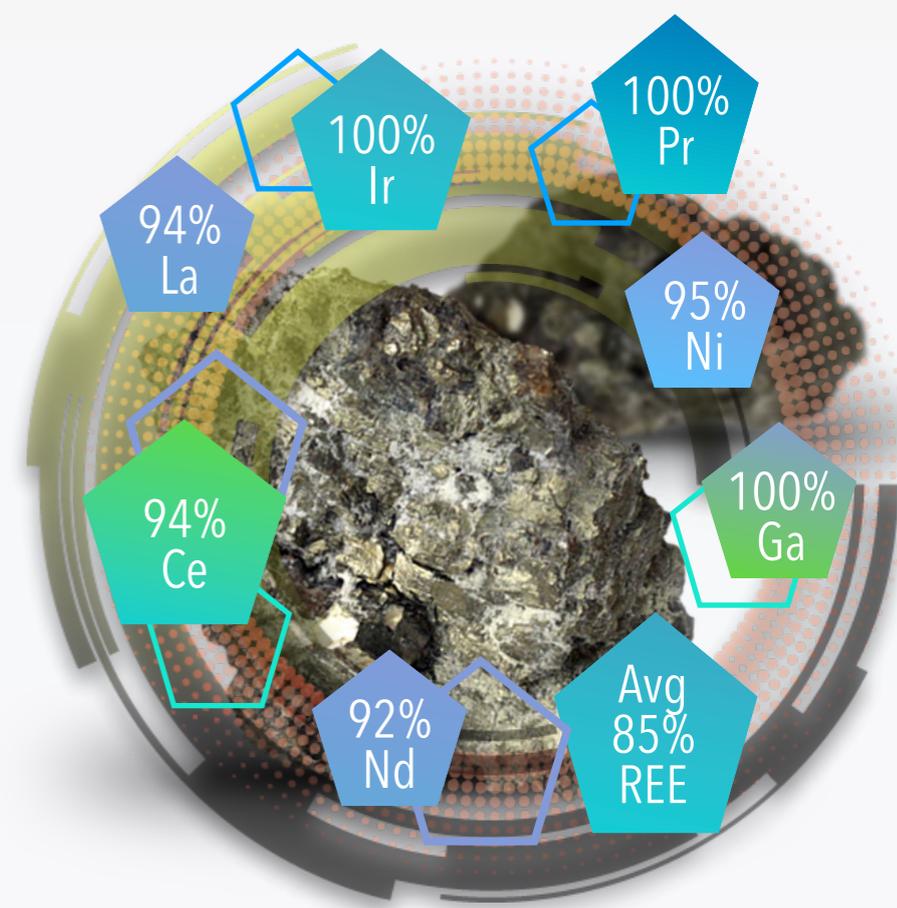

AUXICO and CENTRAL AMERICA NICKEL (“CAN”) have entered into a joint venture agreement which provides AUXICO access to **CAN’s patented Ultrasound Assisted Extraction (UAEx) technology for the processing and extraction of critical minerals, including rare earth elements**. By eliminating the use of pressure processing, thus minimizing temperature, reducing energy requirements, chemical inventory, and by default emissions and waste, while increasing overall recovery rates, CAN’s UAEx can adhere to the most stringent environmental standards. With mining worldwide currently done on a 24-hour cycle for leaching, UAEx can change the global industry and increase efficiency of resource market providers by orders of magnitude the industry standard, at a reduced production cost and resulting in battery-grade refined quality product.

Compared with conventional extraction techniques, **UAEx enhances a possibility to improve extraction yields while reducing the use of reagents due to the accelerated cavitation process**, providing the opportunity to use greener alternative solvents and enhancing extraction of heat-sensitive components; reducing chemicals, waste, energy required for production and CO₂ emissions. A comparison of results obtained by mechanical stirring (500rpm) using the same conditions shows the use of the UAEx process **increases extraction efficiency and recovery up to 35%**. The increased efficiency using the UAEx technology equates to less chemical usage and waste needing to be neutralized, including but not limited to **reduced CO₂ emissions from 20% up to 80%**.

UAEx technology can solve the issues with separation and production of clean products from critical, rare earth and high-value metals; making them viable and economic to recover using ultrasound.

The difficulty of separating and purifying rare earth elements makes their production very expensive. Rare earth elements all display very similar chemical behaviour as a consequence of their peculiar atomic structure, their outermost electron shell is filled the same way, causing these elements to react in similar ways. The similar reactivity is what makes it so hard to separate them from one another. This lack of a strong chemical difference means that separating rare earth metals is a time and energy-consuming process that also generates a substantial amount of acid waste. Using the UAEx, AUXICO have found an effective means of recovering rare earths.

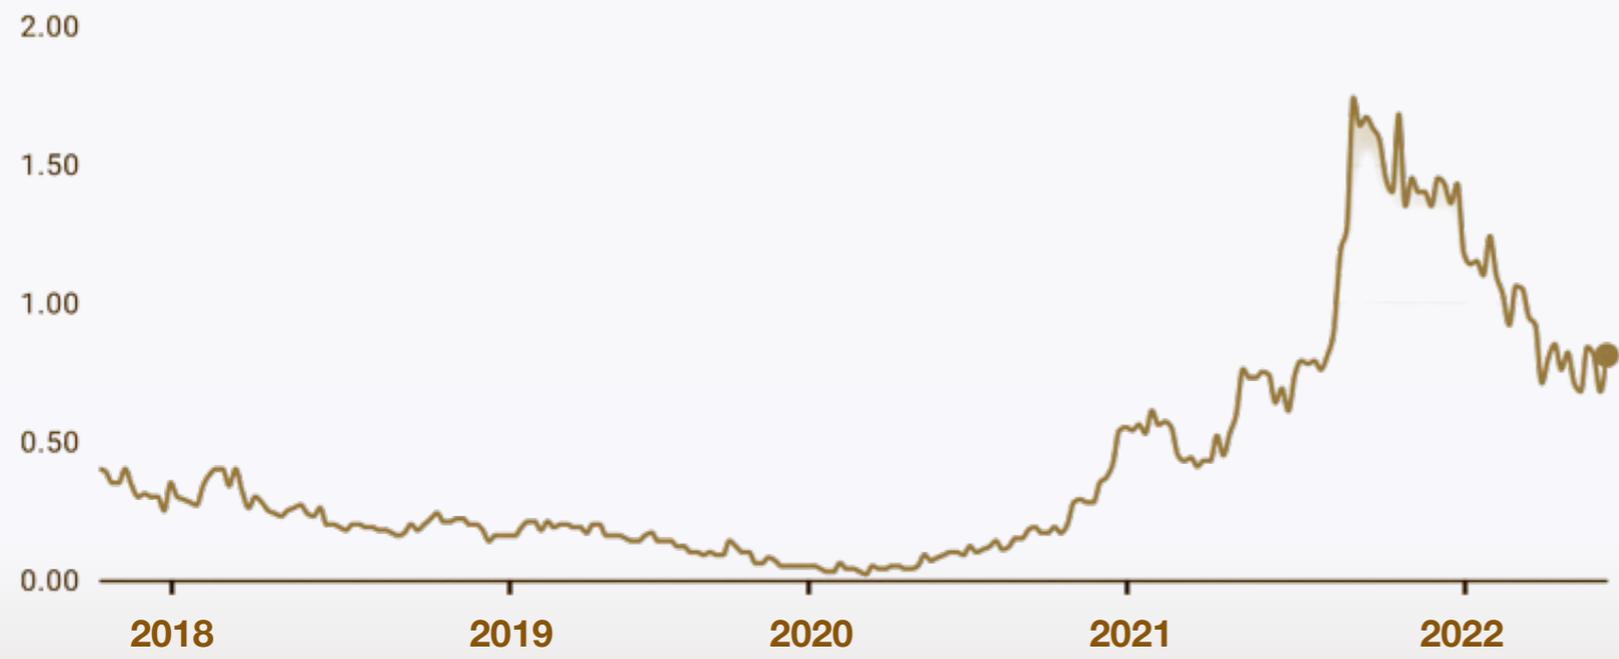

AUXICO, alongside CAN and other technology partners, have developed a **solution to remove radioactive thorium from REE reserves**, making the concentrate non-radioactive and eligible for international shipping. Using UAEx, the thorium content in the concentrate was reduced to less than 0.1%, furthermore UAEx is very effective on high-value rare earth samples, achieving +80% recoveries of select rare earth elements.

RECOVERY RESULTS: THE UAEx INCREASES RECOVERY RATES IN COMPLEX ENERGY METAL EXTRACTIONS IN ONE HOUR; UP TO 95% NICKEL, COBALT, MANGANESE AND SCANDIUM, 80% EXTRACTION OF VANADIUM, TITANIUM, COPPER AND IRON, 85% RECOVERY OF GOLD, SILVER AND VARIOUS RARE EARTH METALS, REACHING 100% RECOVERY IRIIDIUM, GADOLINIUM AND PRAESEODMIUM.

CAPITAL STRUCTURE

* as of November 7, 2022	# OF SHARES

MANAGEMENT

FREDERICK KOZAK

CHIEF EXECUTIVE
OFFICER AND PRESIDENT

Mr. Kozak is a seasoned capital markets and resource executive, with almost 40 years of domestic and international experience. He spent the latter part of his career as a senior executive and board member of private and public companies, including as co-founder of a start-up public international oil and gas exploration company. Prior to that he worked as a globally recognized and top-ranked equities analyst, notably at Canaccord Genuity and Haywood Securities. Most recently, Mr. Kozak was President of a Canadian rare earths and uranium exploration company.

MARK BILLINGS

EXECUTIVE CHAIRMAN

Mr. Billings is a former investment banker, having raised hundreds of millions of dollars for small-cap companies, including several junior mining companies. He has an MBA from Harvard Business School and he is a Chartered Financial Analyst. He founded and managed companies in the junior resource sector, in addition to being CEO, CFO or a director of a number of publicly traded resource companies in Canada and abroad.

TARA ASFOUR

DIRECTOR OF
INVESTOR RELATIONS

Ms. Asfour is an experienced executive consultant with over 10 years of management, investor relations, communications and marketing experience, specialized in capital markets. Ms. Asfour holds a Master's degree in Business Management, a Financial Markets Certificate from Yale University, and Certificate in Alternative Investments from HBS. As Chief Development Officer for FairGreen Capital Partners and Managing Director of its Canadian regional division, Ms. Asfour has led over US\$550 million worth of fundraising and strategic development initiatives. Her previous positions include IR executive at Red Pine Exploration Inc, Communications Director at Dominion Water Reserves and advisor to publicly listed firms.

DIRECTORS

PIERRE GAUTHIER

DIRECTOR

Mr. Gauthier holds a Bachelor of Commerce from the University of Ottawa and a M.B.A. from Concordia University. He was the Founder, President and CEO of Dundee Sustainable Technologies Inc. until December 2014. Involved in the mining industry for over 20 years, he has been involved in raising over \$500 million dollars of financing in various projects. Mr. Gauthier is the inventor of a patented ultrasound extraction technology for scandium and vanadium.

RICHARD BOUDREAU

DIRECTOR

Mr. Boudreault held top corporate executive positions in organizations of all sizes in both the private, public and governmental sector. He is recognized for his Governance, Regulations and ESG issues. He has led organizations across a variety of sectors including advanced materials, natural resources and metallurgy, clean technology, and on energy (hydrocarbon and nuclear). From 2005 to 2014, Mr. Boudreault was CEO of the cleantech metallurgical process and mining Orbite Aluminae, where he raised over \$140M in financing from institutional and government sources and grew the firm from start-up to publicly traded company with a valuation of \$500M at exit. He has developed REE processes and specializes in heavy elements extraction, separation and purification. Mr. Boudreault holds a bachelor's in applied physics, an MBA and a professional master's degree in engineering, which he earned at Cornell.

MELISSA SANDERSON

DIRECTOR

Melissa Sanderson is a globally experienced and forward-looking founder and executive, advising boards and companies how to position themselves for sustainable success by embracing diversity, inclusion and compassion. Her 30-year international career includes diplomacy, negotiation, and business. She is a Professor of Practice at the Thunderbird School of Global Management in Arizona. Melissa served as a senior diplomat, including as Charge d'Affaires in charge of the US Embassy in Kinshasa, Democratic Republic of the Congo. As VP International at Freeport-McMoRan she coordinated Freeport's environmental, social and governmental functions in Peru and Chile, as well as the DRC. Melissa is the recipient of numerous awards, including the U.S. State Department Superior Honor Award and inclusion in the Who's Who of American Women Bankers.

JOSEPH LAU

DIRECTOR

Joseph Lau holds a BSc. (Chem) from Concordia University and an MBA from University of Ottawa. Mr. Lau is the Founder and Chairman of Rockhound Limited in Hong Kong. Since his return to Hong Kong in 1994, he served in Senior Executive positions across various industries, including financial services, RE, telecom and retail jewelry. Mr. Lau is a member of the Chemical Institute of Canada and the Canadian Institute of Mining Metallurgy & Petroleum.

BYRON KING

DIRECTOR

Byron King has an outstanding international career and focus on the critical minerals space, financial markets and public policy. Mr. King studied geology and graduated with honors from Harvard University, and he holds advanced degrees from the University of Pittsburgh School of Law and the U.S. Naval War College. He has extensive knowledge and expertise in mineralogy, specifically regarding rare earth elements and critical minerals, as well as government policies. Mr. King served in the U.S. Navy and has advised the U.S. Department of Defense on national energy policy.

BUZZ WEST

DIRECTOR

A former soldier and head of Reuters, Middle East and Africa, Mr. West has spent the last 25 years as an entrepreneur in the fields of natural resources, high technology and security. He has recently retired as the group chairman at Kingswood Holdings Ltd., the owner of KW-Wealth, having assets under management of approximately £7 billion. Highly experienced in the financial services arena, Mr. West was the founder and chairman of Ashcourt Rowan plc, which had assets under management of approximately £6 billion. Mr. West was also the chairman of the leading loss adjustor GAB Robins, taking them from management buyout to trade sale to the US group Crawford. He was the senior non-executive director to Norwegian telecom company, Norcon plc.

TECHNOLOGY ADVISORS

RICHARD BOUDREAU

CTO & TECHNOLOGY ADVISORY
BOARD MEMBER

Mr. Boudreau has held top corporate executive positions in organizations of all sizes in both the private, public and governmental sector. He is recognized for his Governance, Regulations and ESG issues. He has led organizations across a variety of sectors including advanced materials, natural resources and metallurgy, clean technology, and on energy (hydrocarbon and nuclear). From 2005 to 2014, Mr. Boudreau was CEO of the cleantech metallurgical process and mining Orbite Aluminae, where he raised over \$140M in financing from institutional and government sources and grew the firm from start-up to publicly traded company with a valuation of \$500M at exit. He has developed REE processes and specializes in heavy elements extraction, separation and purification. Mr. Boudreau holds a bachelor's in applied physics, an MBA and a professional master's degree in engineering, which he earned at Cornell. P.Phys., B.Sc., M.Eng., MBA, FRSC, HFRCGS, FCMOS, FInstP, FCASI, FWAAS, FCAE, FIAA, AFAIAA, SMIEEE

DARIA CAMILLA BOFFITO

TECHNOLOGY ADVISORY BOARD
MEMBER

Ms. Boffito is an Associate Professor of Chemical Engineering at Polytechnique Montréal. She finished post-doctorate studies in Chemical Engineering at Polytechnique Montréal, and holds a doctorate degree in Industrial Chemistry from the University of Milan. Ms. Boffito completed the bachelor and masters studies in Industrial Chemistry at the University of Milan. Fields of research and competence Ms. Boffito is experienced in include: extraction processes with ultrasound and microwave; process intensification by alternative energy methods; biofuels and biochemicals synthesis with ultrasound and microwaves; ultrasound- assisted synthesis of catalysts; deposition and coating processes with ultrasound; ultrasound emulsification; ultrasound and microwaves; ultrasound water treatment; and ultrasound-assisted synthesis. B.Sc., M.Sc., PhD

AHMED BOUJILA

TECHNOLOGY ADVISORY BOARD
MEMBER

Mr. Boujila is a senior engineer with more than 30 years of extensive and cross-disciplinary background and experience in mineral processing and extractive metallurgy R&D, technical services and engineering. Mr. Boujila served at CRM/COREM for nearly 20 years at all levels of project, technical, scientific, management and direction lead. He also acted as VP metallurgy and ore processing at G Mining Services Inc. Since 2016, Mr. Boujila, is leading IGS Impact Global Solutions Inc., an emerging R&D laboratory that he founded with the commitment to contribute to solving the most challenging problems of the extractive metallurgy. Mr. Boujila graduated from Laval University in 1986 with a degree in mining engineering and holds a master's degree in mineral processing received in 1988. P. Eng.

JORGE CRUZ MARTIN

EXPLORATION PROGRAM
CONSULTANT

Mr. Cruz is a mining geologist engineer and economist with extensive experience, having worked at the Institute of Geology and Paleontology, as head of the group of Valuation of Mining Assets 1999, working with the BZW (Barclays Capital), until promoted to the National Office of Mineral Resources and manager of Cooperation between Cuba and Brazil for projects of evaluation of mining properties. As of 2005, Mr. Cruz moved to the Office of the Historian at the Centro de Altos Estudios San Geronimo as a professor of Geosciences, worked at SIME as Senior Specialist at Empresa Mecánica Enrique Varona, as well as consultant and advisor to Nichromet Extraction Inc, its subsidiaries Nichromet Guatemala S.A. and Nichromet Dominicana S.A., in Cuba and Guatemala, and consultant for Vale in Colombia in 2008. In 2011 Mr. Cruz was a consultant and advisor to the Minister in the Ministry of Mining and Metallurgy of Bolivia and from 2011-2012 Mr. Cruz was Project Manager at Calvista Gold Corporation, followed by President of Fenix Geoconsultant Ltd. and VP of Exploration of Alicanto Mining Corp. and Alicanto Colombia SAS. By 2013 Mr. Cruz transitioned to Geghi Gold LLC, as a consultant and evaluator of their mining properties and since 2014 Mr. Cruz acted as consultant for several companies, among them Forbes Manhattan (FURA) to attend emeralds and base metals in Boyaca.

APPENDIX - REE Industry Leader Comparison

* Data compiled from Defense Metals Corp Presentation, p11-12. Sources: N. Verbaant, a, K. Bradley, J. Brawnt and S. Mackie. 1 SGS Mineral Services (Lakefield Site), 185 Concession Street PO Box 4300, Lakefield, ON K02 2H0.

The 50 Minerals Critical to U.S. Security

This list of minerals deemed essential to the economic and national security was released Feb 22, 2022.

Critical Minerals		EXAMPLE USES
Hafnium	100%	Nuclear control rods, alloys
Beryllium	11%	Alloying agent in aerospace, defense industries
Aluminum	13%	Power lines, construction, electronics
Zirconium	25%	High-temperature ceramics production
Palladium	40%	Catalytic converters
Germanium	50%	Fiber optics, night vision applications
Lithium	50%	EV rechargeable batteries
Magnesium	50%	Car seats, luggage, laptops
Nickel	50%	Stainless steel, rechargeable batteries
Tungsten	50%	Wear-resistant metals
Barite	75%	Hydrocarbon production
Chromium	75%	Stainless steel
Tin	75%	Coatings, alloys for steel
Cobalt	76%	Rechargeable batteries, superalloys
Platinum	79%	Catalytic converters
Antimony	81%	Lead-acid batteries, flame retardants
Zinc	83%	Metallurgy to produce galvanized steel
Titanium	88%	White pigment or metal alloys
Bismuth	94%	Medical, atomic research
Tellurium	95%	Solar cells, thermoelectric devices
Vanadium	96%	Alloying agent for iron, steel
Arsenic	100%	Semi-conductors, lumber preservatives, pesticides
Cerium	100%	Catalytic converters, ceramics, glass, metallurgy
Cesium	100%	Research, development

INDICATES GOVERNMENT STOCKPILE (Yellow icon)
NET EXPORTER (Green icon)
NET IMPORT RELIANCE (Red icon)

Beryllium
In military fighter jets, pure beryllium saves weight critical to speed and maneuverability.

Lithium
It has the lowest density of all metals.

Nickel and Zinc
Were included in the list because of their high demand for wind and solar power and electric vehicles (EV).

Tin
The metal is used in electronics through solders in semiconductors, a sector that saw a massive spike in demand during the pandemic.

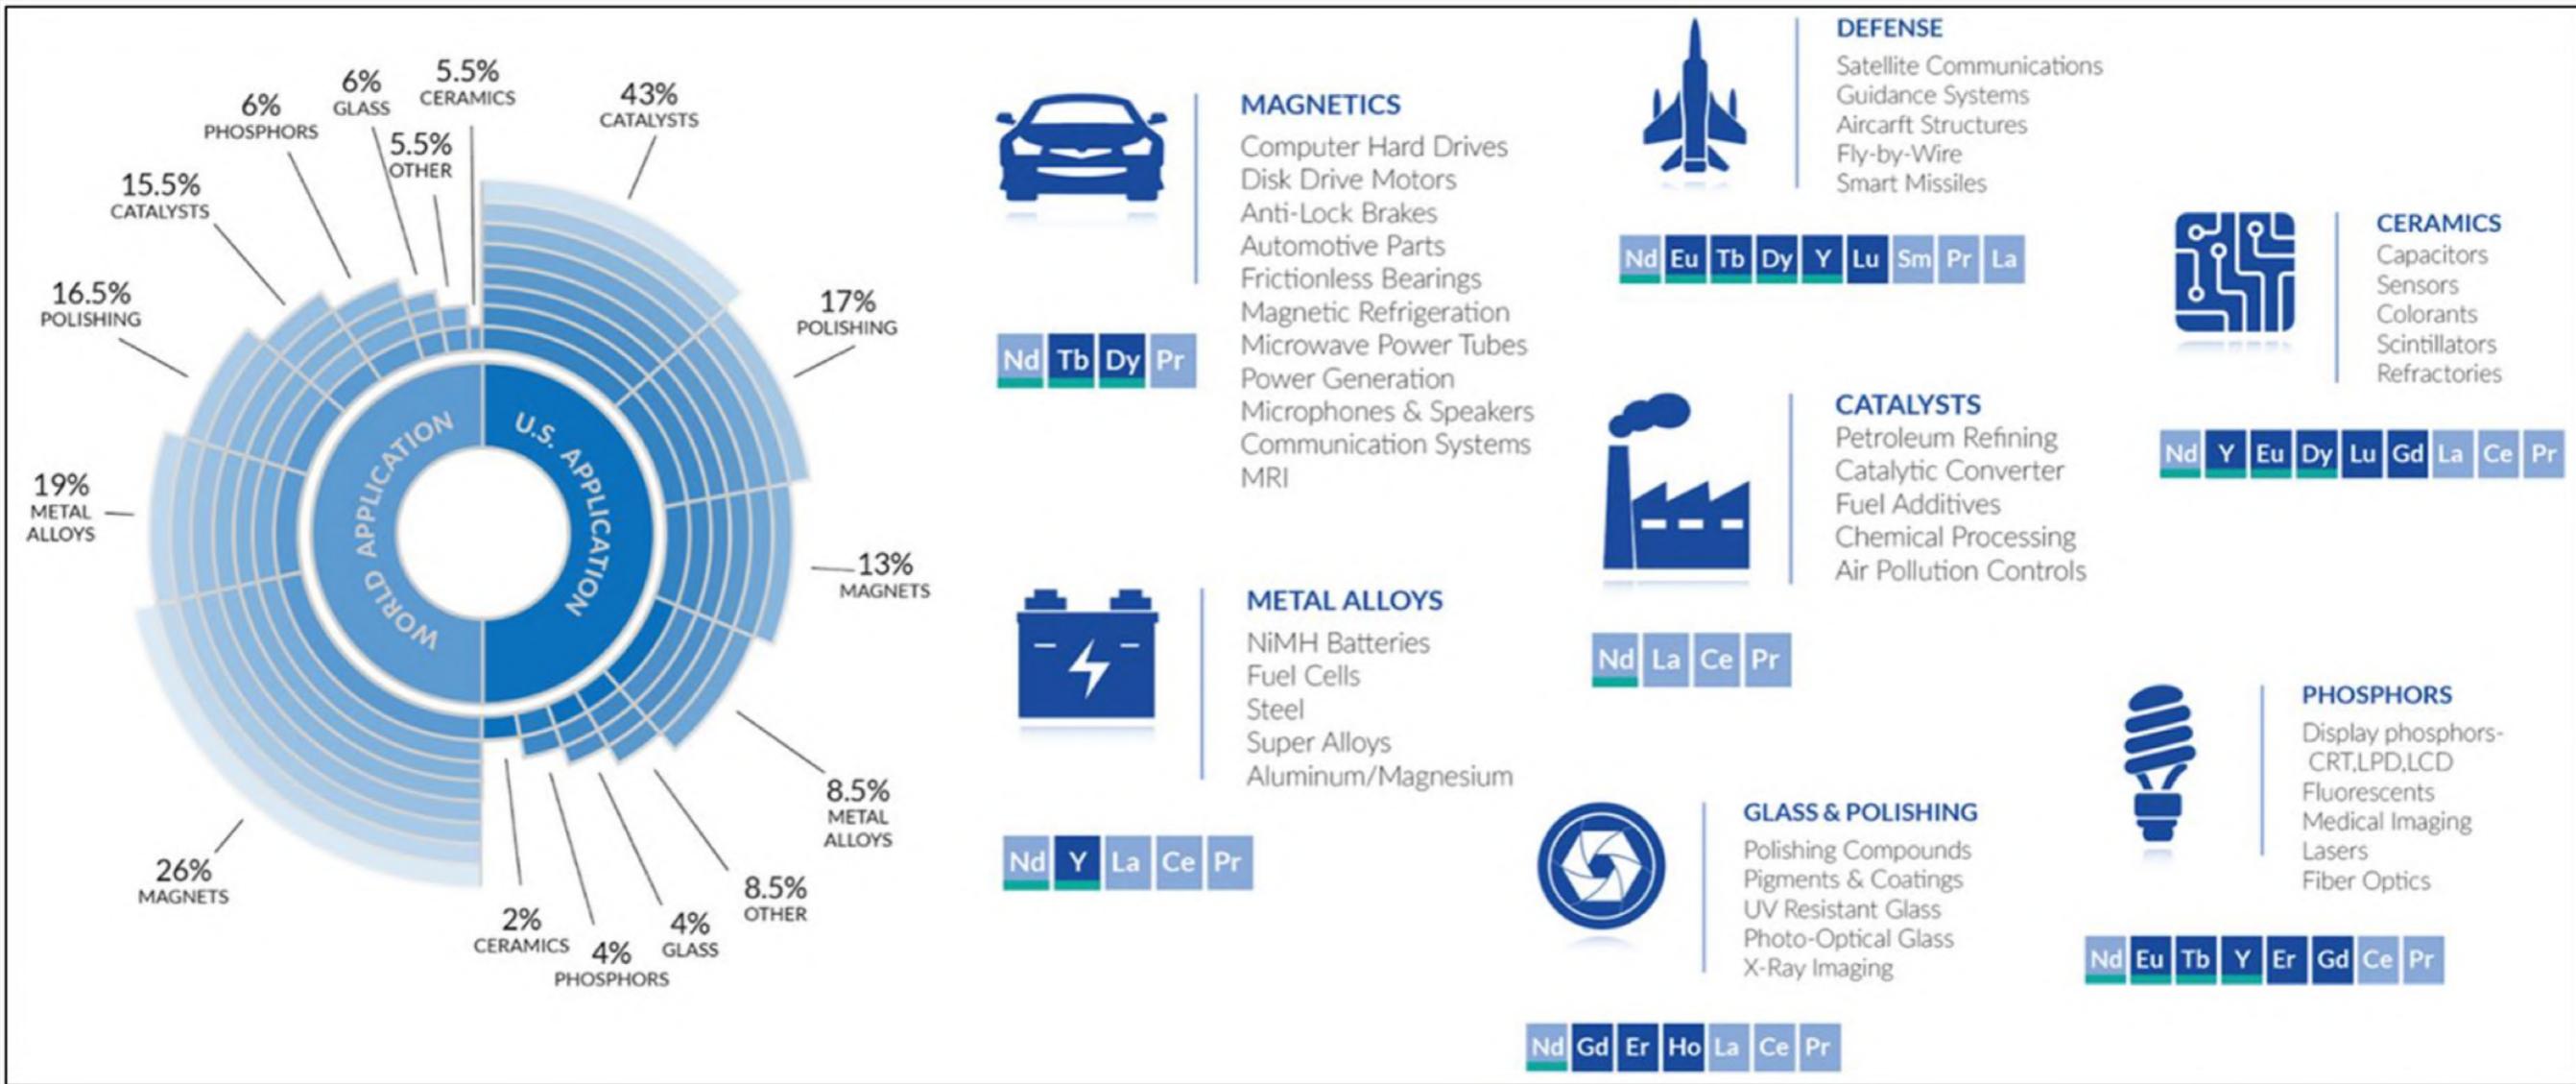

Arsenic	100%	Semi-conductors, lumber preservatives, pesticides
Cerium	100%	Catalytic converters, ceramics, glass, metallurgy
Cesium	100%	Research, development
Dysprosium	100%	Data storage devices, lasers
Erbium	100%	Fiber optics, optical amplifiers, lasers
Europium	100%	Phosphors, nuclear control rods
Fluorspar	100%	Manufacture of aluminum, cement, steel, gasoline
Gadolinium	100%	Medical imaging, steelmaking
Gallium	100%	Integrated circuits, LEDs
Graphite	100%	Lubricants, batteries
Holmium	100%	Permanent magnets, nuclear control rods
Indium	100%	Liquid crystal display screens
Lanthanum	100%	Catalysts, ceramics, glass, polishing compounds
Lutetium	100%	Scintillators for medical imaging, cancer therapies
Manganese	100%	Steelmaking, batteries
Neodymium	100%	Medical, industrial lasers
Niobium	100%	Steel, superalloys
Praseodymium	100%	Permanent magnets, batteries, aerospace alloys
Rubidium	100%	Research, development in electronics
Samarium	100%	Cancer treatment, absorber in nuclear reactors
Scandium	100%	Alloys, ceramics, fuel cells
Tantalum	100%	Electronic components, superalloys
Terbium	100%	Metal alloys, lasers
Thulium	100%	Metal alloys, lasers
Ytterbium	100%	Catalysts, scintillometers, lasers, metallurgy
Yttrium	100%	Ceramic, catalysts, lasers, metallurgy, phosphors
Iridium	?**	Coating of anodes for electrochemical processes
Rhodium	?**	Catalytic converters, electrical components
Ruthenium	?**	Electrical contacts, chip resistors in computers

Tin
The metal is used in electronics through solders in semiconductors, a sector that saw a massive spike in demand during the pandemic.

Rare Earths
Elements like cerium are widely used in batteries and electronics. China is the source of nearly 80% of U.S. imports.

Neodymium and Samarium
Alloys of these rare earths are used in magnets that withstand high temperatures, making them ideal for a wide variety of mission-critical electronics and defense applications.
